

360° Cryolipolysis Cryocool

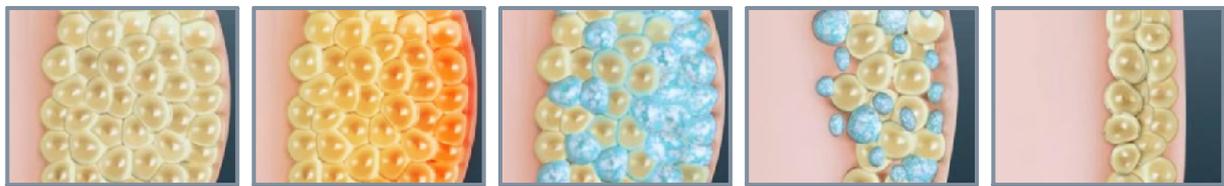

The Five Applicator
Body Shaping System

360° Cryolipolysis Cryocool

Treatment Theory

After the adipose tissue of the target care site is sucked into the cooling probe, the cooling probe releases a 360-degree surrounding cooling energy to act on the fat cells without damaging any surrounding tissue. Cryocool's steady and powerful cooling energy triggers a natural cell death process called "apoptosis", after which apoptotic fat cells are excreted through the body's natural metabolic process. Cryocool targets fat cells for permanent removal from the body, resulting in significant fat loss in the treated area.

Many of us have stubborn fat despite diet and exercise.

Warm-up technology to accelerate blood circulation.

Applicator 360 degrees around fat cells without damaging any surroundingsue.

In the weeks to follow, your body naturally process the fat and eliminates these dead cells.

Cryocool procedure results are long-term, as treated fat cells are gone for good.

Technology Advantages

Four Handles Working Together

5 applicator easy replace

360° cooling, effective in 30 mins

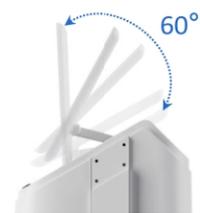

Medical silicone ring Safe & Comfortable

Medical filter cotton safe & convenient

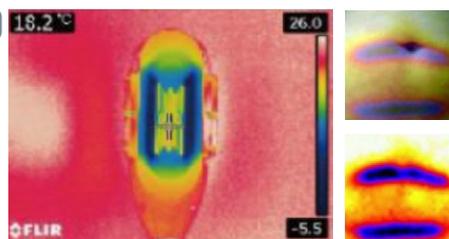

Humanized small screen design, easy to operate

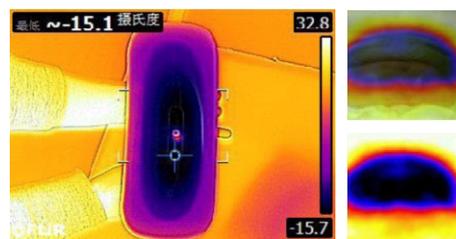

Folding screen to adapt to different scenarios

360° Multi Direction Multilevel Sterioscopic

Cooling on Both Sides

Traditional Cryolipolysis by two Chilling Plates, Only 40% effective for treatment area.

360° Refrigeration

NEW 360° cooling applicator. 100% effective for treatment area. The lowest temperature can reach -15°
